Colorimeter Machine

Model: PRO-CM105

FEATURES:

- Digital colorimeter measuring a sample, with several sample cuvettes. The colorimeter measures the absorbance of different wavelengths of light by a liquid sample. The absorbance is directly proportional to the concentration of the absorbing substance, according to the Beer-Lambert Law. Here a dilute samples of beetroot juice are being studied. Absorbance is measured on a logarithmic scale from 0 to infinity, although 0 to 2 is the most useful range.
