Messe Düsseldorf Asia (MDA for organizing
Medical Fair Thailand

Thank you for stopping by to see us last week! We appreciate your interest in PROMIXCO Medical Device. A big thanks to IVAM for inviting us and moderating the High-Tech Medical Devices Forum that brought together experts and sparked valuable discussions. Thank you to Messe Düsseldorf Asia (MDA) for organizing Medical Fair Thailand and providing us with the opportunity to explore the latest innovations and advancements within the medical ecosystem.

To Ensure Universal Health Coverage

Prime Minister Sheikh Hasina has called upon the international partners to extend cooperation in five areas to ensure Universal Health Coverage (UHC) for all.
"I request our international partners to support us in five areas to ensure Universal Health Coverage for all," she told the "UNGA High-level Meeting on "Universal Health Coverage (UHC)" at the conference room of the United Nations Headquarters here.

The areas are:

First, to sustain development assistance for children, mothers, and adolescents' health and address migrants' health and the climate-health nexus.

Second, to share expertise in developing an inter-operable, data-driven Health Information System with Health ID for all.

Third, to help develop a robust health insurance scheme suited to our context.

Fourth, to enhance health sector investments, including in fast-growing health-tech start-ups; and

Fifth, to comply with TRIP obligations on patent disclosure and technology transfer for protecting public health.

"Our generation can change history by promoting UHC. Let us all join hands to make that possible," she said.

The prime minister said the Universal Health Coverage is one of the most ambitious yet achievable SDG targets.

In Bangladesh, she said, "We have a constitutional obligation to ensure health access for all. We have established a nationwide healthcare system, from Community Clinics to specialized medical hospitals. We work closely with non-government partners at the grassroots."

"We are now working on high alert to combat dengue. We are introducing advanced treatments for cancer, diabetes, and heart diseases," she said.

"We provide reproductive health services in a culturally sensitive manner. We are promoting a "One Health Approach" to prepare against Antimicrobial Resistance. We are raising awareness about nutrition, vision impairment, and drowning," she said.

"Our public health facilities provide services at zero or minimum costs, covering nearly 80% of our population," she said.

Health and Family Welfare Minister Zahid Maleque, MP, and Senior Secretary of the Health Services Division Dr. Md. Anwar Hossain Howlader were present.

Medical Gloves: An Extensive Exploration of Types and Applications

From their essential role in ensuring safety and hygiene to the various types available, this blog will equip you with all the knowledge you need to make informed decisions. Whether you're a healthcare professional or simply interested in understanding medical gloves, we've got you covered.

Medical Gloves: The Essential Buying Guide

Medical gloves are used in healthcare facilities and laboratories where there is a chance of exposure to harmful materials. Medical gloves provide a protective barrier between the wearer's skin and potentially harmful substances. They prevent contamination and reduce the risk of infection.
